GRAPH ADVOCATES SPOTLIGHT

ISSUE #31

*Welcome back to the Graph Advocates Spotlight. Today's issue includes the next Subgraph Spotlight and showcases **Phuture.***

But first, lets take a quick look at the latest news in The Graph ecosystem.

COMMUNITY ROUNDUP

- The Decentralized Network now [supports more than 700 subgraphs](#)
- Coinbase launches Layer 2, Base, [with integration of The Graph](#)
- [Community Talk #20](#)
- Advocate Exclusive: [Learning Series with Yaniv Tal](#)
- GraphOps releases [Graphcast SDK on crates.io](#)
- [UMA & Snapshot launch oSnap](#), gasless voting with on-chain execution, powered by subgraphs
- [Graph-Client version 0.41.0 update](#)
- [Graph-Client library support for ESM](#)
- [GIP-0046](#)
- [Indexer Office Hours #95](#)
- [GRTiQ Episode #104](#) with AJ Warner of Offchain Labs
- [The Graph Central #5](#)
- Four new Graph AdvocatesDAO community grants [posted in the Forum](#)

UPCOMING ADVOCATE EVENTS

Advocates Hangout
Date: 2/27/23
Time: 4PM UTC
Hosted By: Alex

Role Chat: Technical Teacher
Date: 2/27/23
Time: 5pm UTC
Hosted By: Darby

Grant Application Presentations
Date: 2/28/23
Time: 6pm UTC
Hosted By: Doxe

SUBGRAPH SPOTLIGHT

Phuture

1 **What is Phuture and what problem is it solving?**

"Phuture is a decentralized protocol that gives users passive exposure to crypto assets. Phuture creates on-chain index funds and structured products so anyone can get exposure to crypto without the complexity of managing each asset individually. Phuture's products are built with best-in-class methodologies and audited to the highest standards"

2 **How does Phuture differentiate itself from competitors?**

"Phuture is built upon the Phuture V1 protocol that brought several innovations to onchain crypto indices. The first was the advent of yield bearing indices in which yield was generated on the underlying components of the index which led to improved returns. Secondly, our protocol was the first to allow withdrawals from the index even during periods of rebalancing, ensuring that people always have access to their funds. Thirdly, we integrated 0x's exchange architecture directly into our minting, redeeming and rebalancing process to get the very best execution on all our trades. The better execution we get the better our products perform.

In addition, when you come to purchase our products or manage your portfolio the experience is simple and intuitive through our application."

3 **What protocols and dapps has Phuture integrated with?**

"Phuture is deeply integrated into the crypto and DeFi landscape with major integrations with: 0x for our exchange infrastructure, Chainlink for asset pricing, Yearn for yield optimisation, The Graph for all our data indexing, Notional for fixed rate lending, Keep3r Network for all our transaction automation, Push protocol for web3 notifications and more!"

SUBGRAPH SPOTLIGHT

Phuture

4 **What index products is Phuture currently offering?**

"PDI – Phuture DeFi Index – The Phuture DeFi Index tracks the performance of the decentralised finance (DeFi) sector. PDI's weights are determined by a constituent asset's circulating market capitalisation. Assets in the index are used productively to generate yield and improve returns.

CAI – Colony Avalanche Index – The Colony Avalanche Index is the benchmark index for the Avalanche ecosystem. CAI tracks the performance of AVAX and the top applications on Avalanche. Assets in the index are used productively to generate yield and improve returns.

USV – USDC Savings Vault – USDC Savings Vault provides the most competitive low risk returns on your USDC. USV generates interest by managing a portfolio of 3–6 month bonds. USV is powered by Notional, the top DeFi protocol for fixed rate lending and borrowing."

5 **How does Phuture use The Graph?**

"Phuture utilises the data indexed via our subgraph to provide real time information on our products such as price, market cap and quantities of each constituent asset held. In addition, our subgraph offers investors into our products a detailed overview of their portfolio, showcasing initial investment, current investment value, average price and tokens held. This is shown for both the entire portfolio as well as for each individual product.

Our subgraph data also powers our notifications through Push Protocol, delivering weekly updates on PDI's (Phuture DeFi Index) performance as well as notifying when PDI is rebalanced. "
